

Echostar T101 Digital Box

Over the air download (OAD) instructions

1. To receive the OAD the set top box must be tuned to one of the following BBC channels: BBC1 (1), BBC2 (2), BBC3 (7), CBBC (70) or BBC News (80).
2. When the set top box recognises that there is an OAD that applies to it, it will display a menu form indicating that the OAD is available, and advising of the present system version number and the new version available (version 1.10.0). It will invite the user to accept the OAD. However, if the user declines, the box will not provide a normal service until the OAD has been accepted.
3. When the opportunity to take the OAD has been accepted, a new menu form will indicate that an OAD is in progress. The state of progress will be indicated on a bar at the bottom of the form.

An initial amount of progress will be indicated as the process starts, and there will then be a pause while the box synchronises with the beginning of the download data.

It may take some time for the progress bar to continue incrementing and this should not cause concern.

If under unusual circumstances, the bar has not incremented further having waited for 30 minutes, the set top box can be briefly switched off at the mains supply and then switched back on again.

The box will recognise that it was interrupted while doing an OAD. The user should retry taking the download by following the prompts displayed on the screen.

4. When the progress bar begins incrementing again it will complete the download quite quickly. At that point the box has not been updated but has had the new version of software downloaded to it.
5. The box then needs to overwrite its operational software with the new version.

IT IS ABSOLUTELY VITAL THAT THE SET TOP BOX IS NOT SWITCHED OFF DURING THIS OPERATION and a warning will be displayed on the screen indicating that the box should not be switched off.

6. After updating its system software, the set top box will then go into a Stand By state. The user should then bring it out of Stand By using the remote handset.

The box will display a Welcome screen and invite the user to press the OK button and wait for services to be scanned. The scan will complete and the box will become normally operational.

If at any time following a subsequent re-tune, the Guide is found to be fully populated with "No Information" messages, switching the mains power off and back on will restore the Guide information.
